

I . . . Combining precision machine tools with skilled machinists gives us the necessary ingredients to meet your precision requirements consistently.

J . . . Unique requirements sometimes require unique solutions . . . like deburring and polishing internal surfaces.

K . . . Multifunction equipment is utilized whenever part geometry allows.

L . . . The latest in Swiss technology enhances our ability to handle tightly toleranced parts with many facets.

A century of respect for our craft

along with the latest technology

gives us the power

to meet your challenge.

Nine-axis Swiss machining

CNC ID, OD and thread grinding

'C'-axis grinding of irregular shapes

Five-axis milling

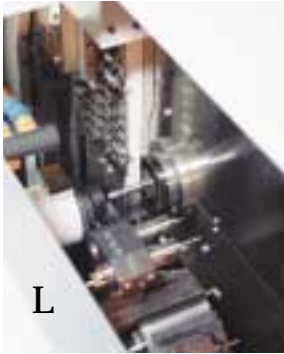

'C' and 'Y' axis turning

Extrusion honing and deburring

CAPABILITIES . . . PUSHING THE THRESHOLD

LaVeZZi enhances the flexibility of today's machine tools even more with creative programmers and operators. They utilize the latest in multi-tasking equipment along with the auxiliary support

required to meet the most demanding production specifications for accuracy, repeatability and rigidity.

From micromachining to deburring, our equipment offers you virtually any precision machining operation for nearly every type of geometric specification

and tight tolerance you require.

Considering the value of your final product, hand packaging of components ensures proper protection during shipping plus easy handling upon receipt.

If you have a challenging component requirement, call, fax or e-mail your drawing or CAD files and specifications to LaVeZZi today. We want to be your precision machining partner . . . meeting your challenges by pushing the threshold.
